

Golden Retriever Pigmentary Uveitis Ultrasound Research Clinics

Dr. Wendy Townsend – Friday, Saturday August 8 & 9

*(This exam is offered at **No Charge** to further Dr. Townsend's research)*

All Breed CERF Eye Exams

Dr. Sue West, Milton, Friday Aug 8th

Pigmentary Uveitis is a serious hereditary eye disease that is specific to Golden Retrievers and becoming more commonly diagnosed. It can be progressive and painful so early detection is important. Early detection is not only important for breeders, but for ALL Golden Retriever owners.

At the GRCGT Regional Specialty in Milton, Dr. Townsend will be conducting FREE ultra-sound examinations as part of her ongoing research at Purdue University. She will also be joining us for the social time after the Regional Specialty on Saturday the 9th. Dr Sue West, an Ontario ophthalmologist will also be offering all breed CERF/OFA eye exams. For information and registration for the Aug 8th & 9th clinics, contact Gord Kerr – gkerr@prettyriver.ca

Dr. Townsend will also be the **keynote speaker** at the National Specialty banquet Saturday, August 2nd in Kemptville (near Ottawa) and will speak in more detail Sunday, August 3rd. Everyone is welcome. For more information and registration for the Aug 2nd & 3rd clinics, go to www.grccnational.com or Susan Roberts – lynwoodgoldens@storm.ca.
