Comox Valley Animal Hospital has been offering transcervical insemination (TCI) services since 2019. Here are some pictures of recent successes using frozen semen from Europe and chilled semen from New York.

We are looking for clients who are interested in having semen collected at Comox Valley Animal Hospital to be shipped to a board certified Theriogenologist in Calgary for freezing and storage. Please send an email to comoxvalleyk9clinic@gmail.com for details and cost.
